

# Surgical Information Packet

## For Your Pet

Dear Client, Your pet has been scheduled for an upcoming surgery in the near future. In our attempt to assist clients, we have put together this packet to make surgery day as easy and stress-free as possible.

In addition to this letter, you will find that the following information has been enclosed:

1. Pre-Anesthesia blood testing Information Form (Please Fill out for Day of Surgery)
2. Surgical Information Sheet (Please Fill out for Day of Surgery)

Please read carefully all the enclosed information. If you have any questions, please feel free to call us.

On your pet's surgery day, we require you to review and sign an **Authorization/Estimate Form** – which allows you to choose optional services.

We require a phone number(s) where you can be reached on surgery day.

**Failure to be reached on the day of the procedure may result in postponement of the surgery.**

The night before your pet's surgery...

- **Withhold all food and treats after 10:00pm**
- **Water may be left down after this time period**
- **If you are currently administering any medications, vitamins and/or injections, Withhold the morning doses unless otherwise instructed by the doctor.**

Please make arrangements for your pet in advance with our mobile services. At time of drop off or Mobile arrival, our team will be happy to answer any questions/concerns and collect the enclosed/completed **Authorization Form**.

Our veterinary team will escort your pet to our mobile clinic for surgical prepping. If there is blood work or other recommended testing to be performed, our team will collect all samples and tests prior to surgery.

If any questions should arise, the doctor may contact you at the number on the Authorization Form.

You are welcome to check up on your pet's status, however, we request that you allow plenty of time for your pet's procedure to be done. Pets will only be eligible for discharge, when our team feels that it is safe for your pet be escorted back in your care. If you do not understand any instructions, please do not hesitate to ask them to go over them one more time.

We hope surgery day will be a pleasant experience. Remember, our team knows surgery can be an anxious time and we are always available to answer any and all questions concerning the upcoming procedure.

We look forward to serving you and your pet on the upcoming surgery day and years to come.

---

# Pre-Anesthetic Blood Testing Form

## Please Read Carefully

Our greatest concern is the well being of your pet. Before putting your pet under anesthesia, we routinely perform a full physical examination.

We also highly recommend that a **Pre-Anesthetic Blood Profile** be performed on all pets undergoing anesthesia to maximize patient safety.

The **Pre-Anesthetic Blood Profile** helps alert our team to the presence of dehydration, anemia, infection, diabetes and/or kidney or liver disease that could complicate the procedure. These conditions may not be detected **without** a pre-anesthetic profile thus not allowing for the most appropriate and safest anesthetic regime to be administered. These tests are similar to those your own physician would run if you were to undergo anesthesia. In addition, these tests may be useful if your pet's health changes to develop faster, more accurate diagnosis and treatments.

The **Authorization Form** you will sign on your pet's surgery date will include pre-anesthetic blood work.

We realize surgery and anesthesia are scary for both the owner and patient. We will always attempt to make surgery day as safe and comfortable for all involved. The physical examination and blood work done prior to any surgical procedure allows us to best minimize anesthetic and surgical risks and maximize patient safety.

If you have any questions or hesitations about the scheduled procedure, please do not hesitate to call us to discuss any aspect of the upcoming procedure.

# Surgical Information Form

## Please Read Carefully

### **Anesthetic Procedures & Risks**

We use a combination of pre-anesthetic medications/injectable and/or inhalant anesthetics to achieve optimum levels of anesthesia that are safe for your pet.

**For short procedures**, an injectable anesthetic is given alone that produces a good plane of surgical anesthesia with a quick recovery.

**For most procedures**, your pet is anesthetized and the intubated (insertion of a tube into the trachea or wind pipe). This will ensure that your pet is able to receive oxygen at all times and prevents aspiration of any fluids into the lungs.

**For procedures that require minimum sedation**, an injectable anesthetic is given that produces a good plane of sedation with quick recovery. Anesthesia is maintained with a gas anesthetic, Sevoflurane, which is very safe and is not metabolized by the body. This allows us to have more control over anesthetic depth and it is less irritating to the airways. Another advantage to Sevoflurane is a quicker recovery from anesthesia.

### **Monitoring & Pain Management**

Monitoring of patients during anesthesia is done in two ways. First, our veterinary team is with your pet continuously from beginning of anesthesia to recovery. Second, we have a computerized monitor that records heart rate, pulse rate, oxygen levels, respiration, ECG, and temperature.

We believe in compassionate, quality, medical care for our patients. And treat our patients Like Family! As a result, all surgery patients will receive pain management before, during and after surgery. Additionally, pain medication may be prescribed home. Additional information will be given at discharge. WE hope this program will reduce any discomfort experienced and aid in a quicker recovery.

### **Intravenous Catheterization & Fluids**

We highly recommend the placement of an IV catheter and use of IV fluids during all anesthetic procedures. This allows us to have quick, available access to the circulatory system (blood) in case of an unforeseen emergency. The fluids help provide support to the circulatory system and prevent dehydration, as well as aid in a quicker recovery from anesthesia.

### **Potential Surgical Complications**

1. **Canine and Feline Spay**
  1. Bleeding
  2. Infection
  3. Recurrent Heat
  4. Urinary Incontinence
  5. Weight Gain
  6. Suture Reactions
2. **Canine and Feline Castration**
  1. Bleeding
  2. Infection
  3. Testicular Swelling
  4. Suture Reaction
3. **Feline Declaw**
  1. Bleeding
  2. Infection
  3. Limping/Lameness
  4. Regrowth of Nail
4. **Tumor/Lump Removal**
  1. Bleeding
  2. Infection
  3. Swelling and Drainage
  4. Suture Reactions

**It is important for you to understand that there is always a risk of anesthetic and surgical complications anytime anesthetic procedures are performed. We strive to take the highest quality care of your pet and take all the added precautions you allow to avoid potential problems. Thank you for entrusting your pet to us.**
